

8.7.2026

Notice to Residents (unofficial translation)

Sandblasting work will begin on **Monday, 13 July 2026**. Sandblasting is a noisy stage of the construction work.

During the sandblasting, the building's internal ventilation system will be switched off. All doors leading to the rear courtyard of the building, as well as the garages, will be temporarily closed and unavailable for use for the duration of the sandblasting. This is necessary to prevent dust from entering the building.

The duration of the sandblasting depends on how firmly the existing coatings are attached to the surfaces. Our aim is to complete the sandblasting during **Week 29**.

If you notice any water leaks or dust entering your apartment, please contact the site management immediately.

Demolition work on the building's end walls will begin during **Week 29**, and balcony repair work will start once the sandblasting has been completed.

The demolition of the end walls will cause vibrations, and the balcony repair work may also cause vibrations in the areas surrounding the balconies. Before the demolition work begins, please remove any paintings, flower pots, decorations, or other items from the end walls, nearby walls, windowsills, balconies, and surrounding areas that could fall due to the vibrations.

We cannot accept liability for damage to items that have not been removed.

We apologize for the inconvenience caused by these construction works and appreciate your patience and cooperation.
